

Cloud Hosting

Why gtechna believes in the cloud?

Our cloud solution is built on a well-established and reliable infrastructure that provides 99.999999999% durability and has a wide selection of data centers for your virtual servers to be hosted on.

This location hosting is a key factor for gtechna because we know that cities like yours have strict legal requirements to abide by, the most obvious one being US cities require web services to be hosted in the United States.

How do you know which package is right for you?

gtechna offers 3 distinct packages to accommodate your city's unique business requirements.

Each package is based on the demands of your ticketing system and based on the size of your organization. The more officers you have, the larger the municipality and the more back office users there are so this is a good starting point if you need to determine which package would best support your needs.

If you have under 20 officers then the Bronze package is sufficient for your needs.

If you are around 50 officers then you may choose to move forward with the Silver package and an organization with 100+ officers should opt for the Gold package.

Benefits of gtechna cloud services

Easy to Use

We do it for you. No on-premises hosting. In fact, every aspect of hosting is managed by gtechna. Freed from the cumbersome maintenance demands of on-prem infrastructure, you can allocate more resources to providing better quality of service to citizens.

Flexible

With gtechna hosting and our Bronze, Gold, and Silver packages we are able to offer you a solution optimized to fit your parking operational needs.

Cost-Effective and Efficient

You pay only for the compute power, storage, and other resources you use. We have the experience to know how the infrastructure can be optimized to maximize the performance of gtechna's applications.

Reliable

You can rely on a team with extensive expertise running cloud applications backed by the world's largest cloud infrastructure.

When events occur, we have an infrastructure of automatic services that will instantly be triggered to make sure the application is running smoothly.

Scalable and high-performance

With a suite of tools at our disposal from Auto Scaling to Elastic Load Balancing, your application can scale up or down based on demand. Backed by a massive and robust infrastructure, you have access to compute and storage resources when you need them.

Secure

We monitor the platform, the application, the data and all your critical application business processes. Our 24/7 support team is always there to support you.
