

Apexx Global Success Story:

PCI DSS compliance doesn't need to be a Road block

Deepak K. Ramanujam
Head of Security - Apexx Global

The Challenge New PCI DSS 4.0.1 Requirements

As a UK-based payment orchestration platform handling large transaction volumes, Apexx Global is subject to Level One PCI DSS compliance, the strictest tier, requiring annual independent audits.

When Head of Information Security Deepak Kumar Ramanujam performed due diligence for PCI DSS 4.0.1, found the new payment page scripts security requirements (6.4.3 and 11.6.1).

These require organizations to:

- Maintain a complete inventory of scripts on payment pages.
- Continuously monitor those scripts for unauthorized changes.

With the March 2025 enforcement deadline approaching, Apexx needed a secure and compliant solution to meet the PCI DSS 4.0.1 obligations.

Why Reflectiz? A Strategic Fit

Deepak identified Reflectiz as a potential solution as the other solutions available in the market have cons of knowing every transaction details and Deepak has foreseen risks with privacy and security.

Reflectiz stood out in three ways:

"One of the most important reasons we went with Reflectiz is that it doesn't need to know transaction details.

That eliminated security and privacy concerns and third-party risk immediately."

Deepak K. Ramanujam
Head of Security - Apexx Global

● Agentless Design

No access to transaction data required, eliminating security & privacy risks.

● Audit Readiness

Evidence generation aligned directly with PCI DSS 4.0.1 standard requirements & examinations.

● Rapid Deployment

A non-invasive setup promised compliance before deadlines without draining internal resources.

Implementation

From URL to Compliance in 24 Hours

The deployment was remarkably fast. Apexx provided its payment page URLs, Reflectiz handled remote setup, and within a single day, the monitoring dashboard was live, tracking every client-side script in real time.

"I was shocked... From handing over the URLs to seeing a fully active dashboard was less than 24 hours. It was the most frictionless implementation I've ever experienced."

Deepak K. Ramanujam
Head of Security - Apexx Global

Audit Success

Zero Observations

For Apexx, success meant more than compliance:

● **Speed-to-Audit**

Closed a critical compliance gap months ahead of deadline.

● **Operational Efficiency**

Freed internal teams from manual monitoring or complex tool integration.

● **Market Confidence**

Maintained Level One PCI status, reinforcing trust with merchants and partners.

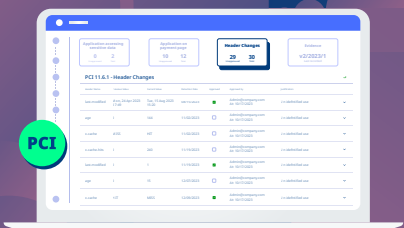

"I was shocked... From handing over the URLs to seeing a fully active dashboard was less than 24 hours. It was the most frictionless implementation I've ever experienced."

Deepak K. Ramanujam
Head of Security - Apexx Global

Bottom Line

Apexx Global's story proves that PCI DSS 4.0.1 compliance, especially the complex new monitoring of payment pages(java scripts) requirements, doesn't need to be a roadblock. With Reflectiz, they achieved rapid deployment, audit-ready evidence, and a long-term boost in visibility and security.

For payment platforms facing Level One scrutiny, Apexx's experience shows compliance can be both fast and future-proof.
