

# Future-proof your SAP ecosystem

Leverage SAP and RunMyJobs  
to automate your critical processes

# Snapshot of a long-standing partnership

2004	First partnership agreement signed	
2008	SAP CPS by Redwood (later SAP BPA by Redwood) launched	
2009 -2018	SAP Business Objects, SAP Industry Solutions, SAP Solution Manager and SAP FCC co-developed	
2021	SAP S/4HANA certified, support for SAP Integrated Business Planning	
2023	"Works with RISE with SAP" certified	
2023	Industry Cloud for Utilities certified	
2024	Support for SAP BTP, SAP Datasphere, SAP Integration Suite	
2024	SAP Pinnacle Award in New Partner Application category	

## A word from Devin Gharibian-Saki

It's important to vet who you associate with. And when they'll have a hand in your business's success, it's even more crucial.

At Redwood Software, we've been automating the enterprise for over 30 years, so we understand how essential yet precarious business relationships can be. We want to help you make the best decisions about who to trust with your data, processes and money.

In 2004, we initiated our most valued partnership — with SAP. Twenty years after SAP ERP Central Component (ECC) was introduced to the market, this relationship is still going strong. Over the past two decades, Redwood has been SAP's partner of choice for workload automation, earning a multitude of SAP certifications and awards and driving consistent co-innovations.

Workload automation (also known as job scheduling) orchestrates complex, long-running, mission-critical processes. Our enterprise solution, RunMyJobs by Redwood, was built for SAP, automating processes end-to-end across your entire tech stack. As thousands of organizations worldwide have discovered, RunMyJobs — paired with our managed file transfer solution, JSCAPE by Redwood — perfectly complements SAP's ERP and suite of solutions.

Redwood has been alongside SAP for the evolution of its technologies, including S/4HANA and other cloud offerings, closely aligning our product roadmaps to provide continuous, seamless support to SAP customers.

Just like the dedicated people of SAP, the Redwood team is driven by customer success. Read on to find out how our strong partnership can enable you to achieve greater efficiency and reduce complexity via seamless end-to-end automation.

Senior VP of Business Development and Strategy at Redwood Software

# The goal: Automation fabric

If you're like most business leaders today, you expect your technology investments to drive core business outcomes — e.g., revenue growth, cost reduction or risk mitigation — and deliver a superior customer and employee experience.

The challenge? Best-of-breed applications have created an endless sea of silos that do everything incredibly efficiently alone but virtually nothing together. Yet, almost every mission-critical business outcome now requires multiple applications to work together and tightly integrate with your established systems of record, like your ERP system.

To make things even more complex, all these bespoke applications and systems are often running on tech infrastructure that's outdated and constantly changing. This creates what we call n-dimensional complexity — far too difficult a problem for humans to solve.

To move smoothly into the future and limit the risk of costly issues arising from disconnected systems, **you need an automation fabric**. A purpose-built solution with the flexibility to work across any IT infrastructure can future-proof your tech stack.

**RunMyJobs**  
by Redwood

The full stack automation platform solving for  
the complex process automation needs of SAP  
enterprise customers

“

We knew our back-office processes involving SAP ERP and other key enterprise applications would benefit from true standardization and end-to-end automation. Redwood is a robust, high-performance, secure, stable and scalable platform for end-to-end process automation.

Christophe MacGarry,  
Global Finance Transformation Director

**FORVIA**

# The SAP and Redwood difference

Why is RunMyJobs by Redwood SAP's #1 job scheduler?

Uniquely built for

# SaaS

Works with

**on-premises,  
cloud or hybrid**  
environments

## RISE WITH SAP

Supports RISE with SAP landscapes by connecting job scheduling to your S/4HANA cloud environment — and providing it as a managed service

Integrates with

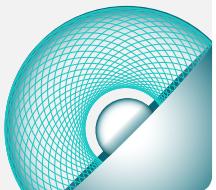

**JSCAPE**

for enterprise-grade managed file transfer

Offers the highest support SLAs in the industry with **24/7** availability and **15-minute** response times

Maintains SAP's clean core out of the box with seamless pre-built SAP connectors and API integrations

Features lightweight agents that enable instant updates and

**99.95%**  
uptime

SAP consistently recognizes Redwood as an award-winning partner.

Provides optimal security and customization thanks to **single-tenant** architecture

“

*Having worked at SAP for over 24 years, I've encountered numerous partner solutions that added varying degrees of value to SAP offerings. RunMyJobs by Redwood may be the most critical partner solution for any RISE evaluation, as it can accelerate the adoption of new innovations for customers transitioning to cloud with SAP.*

Neil Krefsky, Redwood Senior Product Marketing Manager - SAP

# A full catalog of native connectors

With the broadest and deepest set of connectors on the market, RunMyJobs autonomously integrates SAP and non-SAP systems, bringing them all together in a single pane of glass.

The platform works with any SAP setup, including legacy ECC, SAP BTP and SAP S/4HANA.

## Extensive system integrations and pre-built connectors:

SAP S/4HANA (public, private, on-prem) and legacy SAP solutions

SAP Integrated Business Planning (IBP)

SAP BTP, including SAP Integration Suite, SAP Data Services, SAP Datasphere and SAP Analytics Cloud

Get access to new features, modules and integrations the moment we add them to the automation [catalog](#). No need to wait for a product release or even restart your system.

### Comprehensive support for all SAP ERPs

Run, control and monitor ABAP programs, batch input maps, iDocs, BAPIs, events, mass activities, process chains and application jobs in:

- ECC, BW and all other products in the Business Suite
- S/4HANA on-premises
- S/4HANA private cloud
- S/4HANA public cloud

### Automation for BTP integration solutions

Run, control and monitor:

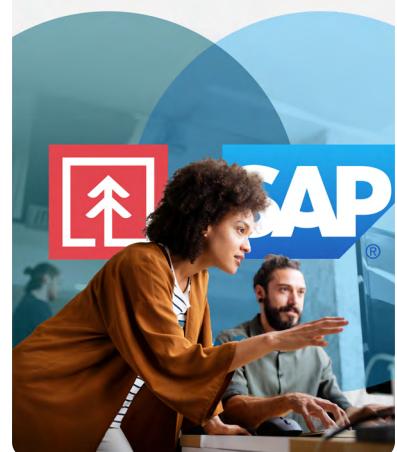

- iflows in BTP Integration Suite and Cloud Platform Integration
- Tasks in Cloud Data Services

### Automation for BTP analytics solutions

Run, control and monitor:

- Task chains and real-time replication in Datasphere
- Reports in Analytics Cloud
- Data feeds in SAP AI

Many RunMyJobs connectors have been co-developed with SAP engineers!

# Uncompromising security

Part of our commitment to powering your most critical business processes is maintaining strict security controls to protect your company and your data.

## Fully encrypted connections

Stay safe and secure at all times, knowing all communication is encrypted via TLS 1.3 and SSL and the connections between our SaaS platform and your landscape are initiated from your network.

## Third-party penetration tests

We regularly check for vulnerabilities using third-party testers to ensure our protocols and internal processes exceed requirements for keeping your data secure.

## Top-rated certifications

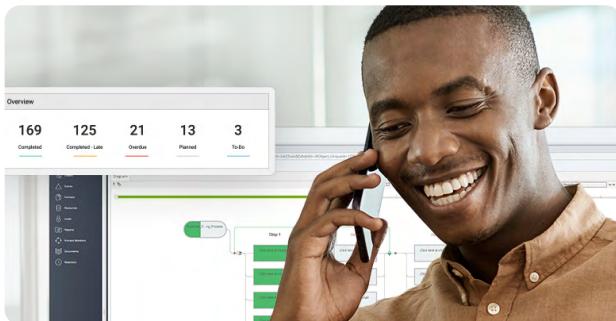

Redwood is proud to have been awarded best-in-class security certifications, including ISO/IEC 27001:2013, SOC 2 Type II and CSA's STAR Level I.

Verify users with unlimited SSO configurations.

# Unparalleled support

Your success is our priority. Redwood's team is structured just like SAP's and provides rapid response for any issues.

## Proactive issue handling

Redwood proactively conducts a support analysis on your account twice annually to review your support ticket patterns and offer training to help your team minimize future concerns.

## Expert oversight

A dedicated engineer reviews and monitors your support requests to guarantee no issue goes unaddressed.

Get 24/7/365 global support throughout our relationship.

“

With Redwood, we achieved immediate visibility into any problems that arise so we can rapidly take corrective action. Since implementation, we've had no operational overruns.

Chris Waterfield  
Business Systems Manager

anglianwater

## Industry Cloud for Utilities designation

Recognized as a preferred solution by SAP Utilities leaders, RunMyJobs holds SAP's Industry Cloud for Utilities designation. RunMyJobs' meter-to-cash process automation, which SAP does not natively address, supports large-scale transactions from meter data collection to customer billing and payments, significantly enhancing process efficiency.

# RISE with SAP and RunMyJobs

SAP has built its 50 years of success on a foundation of key capabilities:

- A world-class ERP supporting industry-specific requirements in 27 different industries
- End-to-end support for value-chain processes for organizations in those industries
- The flexibility to enrich and adapt the standard software to meet the individual requirements of the customer

Today, you may be asking for those same benefits from SAP yet running your business operations across hundreds of applications, which conflicts with SAP's clean-core approach. The natural move is to the cloud via the [RISE with SAP program](#).

According to a German SAP user group surveyed in 2023, many SAP customers were hesitant to embark on the RISE program journey due to worries about adding complexity, efforts and costs to their business transformations. Now that more businesses have seen success, it's clear that S/4HANA Cloud is advantageous to SAP users. If you're ready to RISE, you need to ensure your core system of record is fully integrated and uninterrupted.

RunMyJobs supports your SAP transformation journey as the **first SAP-certified, SaaS-based workload automation platform** that seamlessly integrates with S/4HANA Cloud. And the only solution that maintains a clean core.

**SAP Certified**  
Integration with RISE with SAP S/4HANA Cloud

## Managed services to support your RISE landscape

- SAP ECS exclusively connects your job scheduling to your RISE and S/4HANA Cloud environment.
- There's no need for additional IaaS to deploy and use RunMyJobs.
- SAP ECS will soon launch another managed service for monitoring, alerting and resolution for critical jobs.

## Elimination of custom code

- RunMyJobs replaces homegrown ERP transactions poised for automation.
- You can leave behind legacy scheduler custom code.
- Access out-of-the-box capabilities that upgrade in minutes.

## Seamless job orchestration

across any SAP and non-SAP technology

## Continuous operations

through all phases of RISE

# An unprecedented number of SAP certifications

RunMyJobs holds the highest number of certifications of any job scheduler in the [SAP Certified Solutions Directory \(CSD\)](#), where customers can find the most compatible and reliable solutions to make implementing and innovating easy.

- **30 years** in job scheduling automation
- **20 years** directly working and collaborating with SAP
- **12 years** powering SAP's BPA job scheduling solution\*
- **6 SAP certifications** — more than any other job scheduler

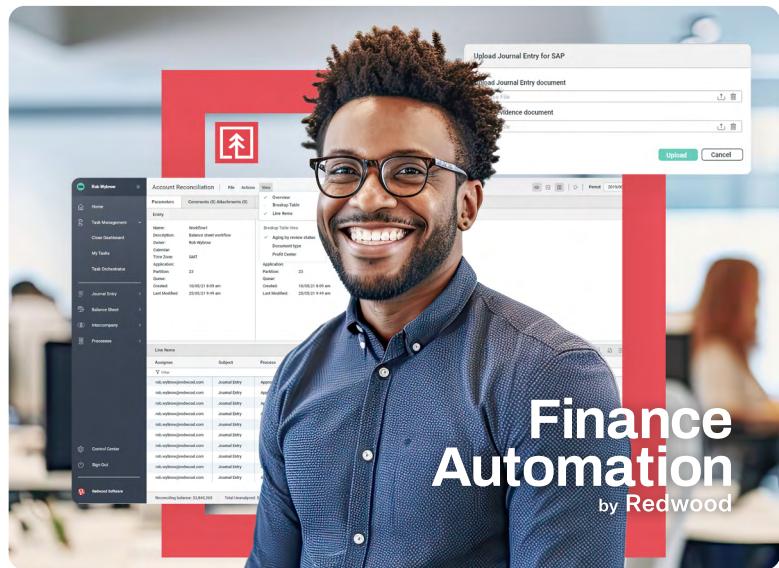

\*BPA was offered as Redwood's white-labeled RunMyJobs product

# Tightly integrated record-to-report processes

- Automate financial transactions and process raw data into structured tables
- Perform advanced data processing and manage the financial close within SAP
- Strictly adhere to SAP's security protocols for your financial processes

RunMyJobs isn't Redwood's only SAP-partnered solution. Leveraging standard APIs and native ERP functionality such as SAP t-codes, Finance Automation by Redwood operates with your live ERP data in real time. It extracts, calculates and seeks required approvals using built-in and easy-to-configure automation and posts accounting and other records directly into your finance system, eliminating the need for duplicate records or master data.

Finance Automation by Redwood is also an SAP-certified product.
