ScalaHosting Highlights

Superb Reputation

The most popular global consumer review platform, Trustpilot, ranks ScalaHosting #1 in both [Web Hosting](#) and [Cloud Computing](#) categories. We maintain a 5-star rating across all major review platforms like [Google Reviews](#), [G2](#), [Sourceforge](#), [Sitejabber](#), and many other review platforms.

Focus on the Cloud VPS

Based on our two decades of experience, we believe that traditional shared hosting will soon be replaced by way more advanced cloud VPS. Therefore, we focused all our R&D on developing solutions to make this transition as smooth as possible. Our "Entry Cloud," for example, is a hybrid solution where most of the shared hosting specifics, like the low price, unlimited accounts, bandwidth, etc., are kept, but the VPS benefits like guaranteed resources, unique IP, super-fast loading speeds and more are added on top.

Exclusivity with the 2nd largest CMS in the world

In 2021 ScalaHosting was selected by Joomla.org as a [global exclusive VPS provider](#), and the contract has been consistently renewed ever since. Joomla is the 2nd most popular CMS globally, but when it comes to heavy-load websites and digital agencies, it's always the number one choice. ScalaHosting is the only hosting provider endorsed by Joomla's founder, [Brian Teeman](#).

Powerful Cloud Control Interface Endorsed by the Big Players

Developed entirely in-house, SPanel is an all-in-one control panel, a full-scale cPanel/WHM alternative, and a regularly updated software hub. It allows our customers to create and manage an unlimited number of virtual servers, email accounts, and websites in a highly redundant and easily scalable cloud environment deployed over multiple data center locations around the globe. It helps companies to transform digitally with ease and website owners to experience the true power of the Cloud. ScalaHosting and SPanel are endorsed and listed in various "best hosting" listings by all global tech publishers like [TechRadar](#), [ZDNet](#), [Forbes](#), and many others. [Here](#), we collected some of the endorsements we received recently.

Technology Innovations

Forged entirely in-house and powered by our vast experience in the hosting sphere, we regularly introduce unique technologies and solutions designed to change the global cloud landscape. Like the [Multi-Datacenter-Cloud-Clustering](#), a solution forged to support mission-critical online projects. Recently our solution has been used by the Philippines Election Agency to support their presidential elections in 2022, and during the election days, it successfully sustained over 100M clicks per day.

SPanel Highlights

What is SPanel:

[SPanel](#) is a cloud VPS management platform, and a full-scale cPanel/WHM alternative, developed entirely by ScalaHosting, allowing every website owner to easily manage servers, websites, emails, etc., in a secure environment powered by our 24/7/365 managed support.

What's unique about SPanel

- The **Cloud Democracy Project** – SPanel is **designed by the user for the user** backed up by the two decades of practical experience we got working with hosting customers and facing their problems every day. Instead of developing functionalities we want and will monetize, we took a different approach by allowing the web developers and hosting users to design it according to their real needs. At [features.spanel.io](#), everyone can suggest new features and vote for existing ones, and we always develop user requests that have the majority of votes.
- The **Ultimate Freedom** – With SPanel' full server management included, the user is no longer locked with any hosting company. Based on their needs and preferences, they can select any public cloud provider, like AWS, DigitalOcean, Google Cloud, or any other. SPanel is adding a new layer on top, providing the user with both the interface and the hosting support. Simply put, **with SPanel, everyone can convert any self-managed VPS service into a fully managed one**. If, at one point, the customer is not happy with his infrastructure provider, they can always change it with a few clicks.
- **The first-ever fully managed hosting control panel** - If the user chooses the "Full Server Management Included" option when [ordering a SPanel license](#), our 24/7 live technical support will cover all issues related to their server and the accounts created on it. They can request a free and effortless migration at any time and get technical assistance right from their SPanel interface by clicking on the live chat icon, which immediately connects them to a technician, or by opening a ticket from their client's area.

SPanel is endorsed and recommended by the big players

- Find us organically on Google page one Top 3 results for Best cPanel alternative – [Techradar](#) and [Guru99](#) are just to name a few
- The most popular Web Server – [LiteSpeed](#), as well as its free version [OpenLightSpeed](#) recommends SPanel on their homepages
- Well-known IT publishers like [Geekflare](#), [eSecurity](#), [HostAdvice](#), [WPexplorer](#), and others, reviewed and endorsed SPanel as well.
