Supported Systems

Windows

Linux

MacOS

Key Benefits

- Free Support
- Silent Install
- Customer Portal
- Re-brandable
- Let'sEncrypt support
 - » Free auto-renewing SSL
- Comprehensive API
- Create a USB recovery wizard
- Offer a 14-Day Customer Guarantee to try your backup business risk free
- Large and growing ecosystem of technology and storage partners
- Remotely control the desktop client from the server:
 - » Upgrades
 - » Uninstall
 - » Live-browse the client device and configure backups

Technology Benefits

Underlying Comet is our modern, incremental forever technology providing powerful advantages for business continuity planning.

Fast & efficient

Client-side deduplication

Ensures there is no bloat in your storage usage or costs, saving space with fast, bandwidth-efficient backups.

Incremental forever

Your oldest backup can restore just as fast as your most recent. No need for differentials or delta-merging.

No full re-uploads

After the first backup, you'll never have to re-upload the full file again.

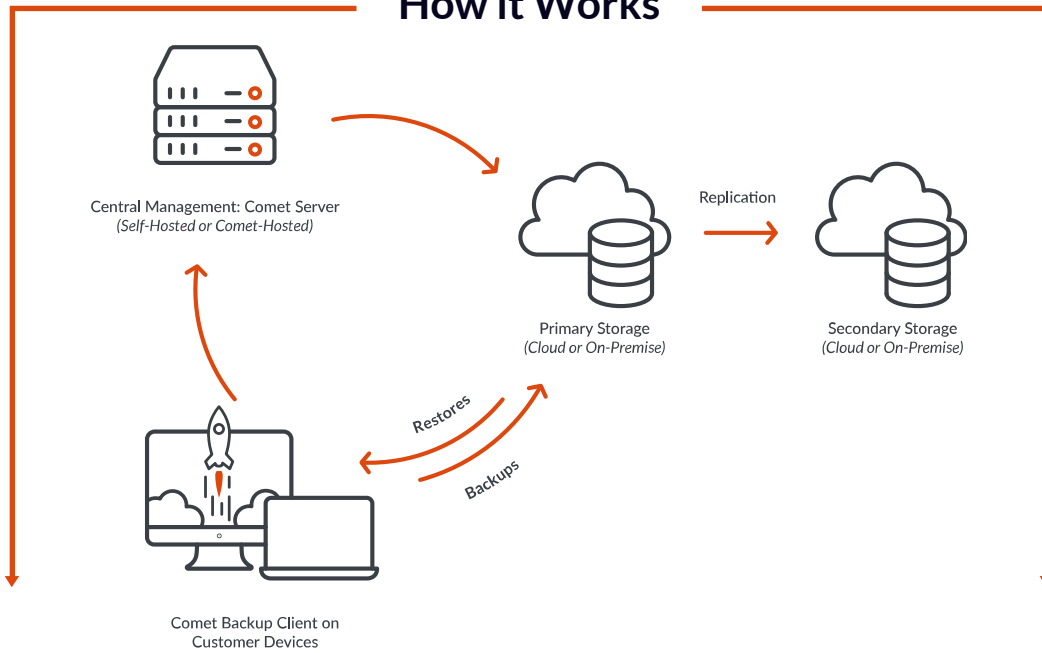

Highly secure

Compressed and encrypted

During backup, transit and rest. The only time it is unencrypted is during a restore.

How it Works

Security

Packed with all the Features MSPs Need

All-in-One

per-device pricing

No Java or .NET

Support for
Code Signing

Choose your Server Option

Self-Hosted

Self-host a Comet Server in your own physical or virtual environment. Suited for maximum flexibility. Control your set up by utilizing your own infrastructure.

- Client-Server model
- Totally configurable
- SSL ready
- Host server anywhere
- Spin-up multiple servers free of cost

OR

Comet-Hosted

Comet Server hosted and managed by us on a private AWS cloud. Perfect if you need a quick, easy, off-site solution.

- Instant setup
- No hardware
- SSL pre-configured
- Easy to spin-up multiple servers
- Fully managed software updates

Backup Capabilities

Files & Folders

Easily protect files/folders in **Windows, Linux and MacOS** with the added benefits of configuration for:

- Custom schedules
- Custom exclusions
- Custom retention
- Remotely configuring backups from your server

Also includes: MySQL, Program Output, Windows System Server State, Windows System Backup

Disk Image

Protect **entire disks and partitions on Windows** for full system/bare-metal recovery. Restore your system to either physical, VM or the cloud.

- Backup directly to cloud storage with no local cache
- No spool space required
- Restore directly to devices/partitions 'bare-metal recovery'
- Restore to dissimilar hardware or as virtual disk files (.vmdk)

Application Backup Capabilities

Microsoft Office 365

- Protect Outlook, OneDrive for Business, SharePoint and Teams files with domain or user-level backups. Restore to your original O365 account, to the cloud, or to local. Built-in Azure AD application registration.

Microsoft Exchange

- Protect Exchange Server 2007 and above, including 2019.

Microsoft SQL Server

- Protect SQL Server 2005 and above, including SQL Server 2019 with No spool space required.

Microsoft Hyper-V

- Protect all versions of Hyper-V running on Windows Server, including Windows Server 2016.

Application Backup Capabilities

(continued)

MongoDB

- Protect MongoDB databases and cloud hosted MongoDB services (SaaS) with no additional pool space required.

Application-Aware Writer

- Comet's "Application-Aware Writer" feature allows you to back up files in applications that utilize a VSS writer. Uses for this include backing up:
 - » OracleDB
 - » MailStore Server
 - » Microsoft Dynamics CRM
 - » Microsoft SharePoint
 - » Pervasive PSQL

Included with Files & Folders Backup

MySQL

- Supports Oracle MySQL and compatible servers such as MariaDB and Percona Server with No pool space required.

Windows Server System State

- Windows Server System State supports backing up System State .vhd files.

Windows System Backup

- Protect entire system volumes as .vhd / .vhdx files.

Program Output

- You may use the "Program Output" stdout Protected Item type as an integration point to back up a variety of different programs including:
 - » Percona Server
 - » CouchDB
 - » Interbase XE7
 - » RethinkDB
 - » PostgreSQL
 - » Neo4j
 - » Firebird
 - » Docker
 - » Cockroach DB
 - » WordPress

Simple Monthly Pricing

Comet supports businesses with our affordable, scalable per-device pricing.

No charges for updates, support, replication, server licenses or re-branding

Customers only pay for monthly service usage

- » No large upfront expenditure on licensing
- » Costs scale in-line with growth

FREE
30 Day Trial

Price Breakdown
